

METHOD AND SYSTEM FOR MANAGEMENT OF ELECTRONIC RECEIPTS ON PORTABLE DEVICES

ABSTRACT OF THE DISCLOSURE

5 A system for managing electronic receipts is provided. According to one
aspect, the system includes a portable device, a base device, a user device and an electronic
receipts administration system. The electronic receipts administration system provides the
base device with the appropriate data to allow the base device to generate, store and manage
electronic receipts accordingly. A user uses the portable device to conduct a transaction with
the base device. The base device uses a variety of information to generate an electronic
10 receipt for the transaction. Such information includes, for example, information stored on the
portable device, information stored locally on the base device and information stored on
another device such as an electronic cash register. The electronic receipt is then stored on the
portable device. The user device allows the user to subsequently retrieve the electronic
receipt for management purposes.
